The Market's Line in the Sand

Special Edition — New Technologies Sector

Special Report
Winter 2013/2014

Makism3D Corp. (MDDD) debuts the next-generation in 3D printers!

Spring 2014
holds a key date for
MDDD investors!
See page 11...

*Creates almost
any shaped
object on a
desktop printer!*

- Makism3D (MDDD) next-gen tech makes high-quality professional grade 3D printing affordable to all! See page 4.
- MDDD could be a prime candidate for acquisition by Hewlett Packard, but don't rule out Canon, Brother or any other tech giant... See page 7.
- Buy MDDD right now and you're set for massive gains in a global 3D print revolution! See page 5.

THE BIGGEST OPPORTUNITY IN 2014
The new Makism3D Wideboy™ printer smokes the competition, making it a prime candidate for Hewlett Packard's 2014 acquisition plans!

MDDD presents a stunning opportunity for you to grab a quick 300% to 500% winner in an emerging red-hot market!

Sales of 3D printers will explode in 2014 and the new Makism3D Wideboy could become the world's best seller!

Makism3D is screaming for a big-ticket buyout... and key indicators point to Hewlett Packard as the technology giant that could send MDDD on a chart-busting tear!

Here's the story you need to know now...

INSIDE: WHY MARCH 10, 2014 WILL BE THE MOST IMPORTANT DAY OF THE YEAR FOR 3D PRINTER MARKETS...See page 5

Andy Chambers
Editor, *The Market's
Line in the Sand*

A brief note about this exciting new report and investment opportunity:

There's little question that 2014 will be the breakout year for 3D printers. In my view, it presents an investment opportunity not to be missed.

I believe 3D printing will explode into consumer markets and quickly fly past early adopter stage.

Growth will come rapidly as 3D printers become commonplace in homes and offices worldwide.

In my research into this market, Makism3D Corp. and its flagship Wideboy printer, I've come to the conclusion that the Wideboy is the next-gen solution that can define what 3D printing is about to become.

As you read this report, keep in mind that I have drawn my conclusions from what I believe are reliable sources, but as I always tell my readers; be sure to do your own due diligence before making any investment decision.

"Mid-priced 3D printers will be among the fastest growing technology sectors in 2014-2015. My top pick for profit from this explosive market trend is an immediate buy in Makism3D Corp. (MDDD)"

Here's why you should invest in Makism3D (MDDD) before the end of this year.

In 2014, the market for professional grade, consumer-priced 3D printers (in the \$2,500 to \$3,500 price range) is expected to skyrocket.

Like any breakout technology, the initial profits made by early investors can be staggering.

300%,...500%...1,000% or more. These are realistic growth figures that can occur in a span of just a few months, which is why **Makism3D (MDDD)** should be on your buy list right now.

Makism3D (MDDD) has announced a game-changing breakthrough in 3D printing that brings the most desirable features and performance of machines selling over \$50,000 to a price point of around \$3,000.

These changes from **Makism3D** could hit the market in early 2014. It will be highly unlikely that you could stake a ground floor position in **MDDD** at that time.

Today, **MDDD** trades in the \$1.00 range. By early 2014, it could be over \$3.00. By the end of the year, over \$10.00!

3D printing is coming fast and hard. The time to make your move is now.

RECOMMENDED BUY IN 3D PRINT TECHNOLOGY TIMEFRAME: IMMEDIATE OPPORTUNITY

Makism3D Corp.

CURRENT: Makism3D Corp. (MDDD)
Initial offering: Around \$1.00/share
Near Target: \$3.00
Long Target: \$5.00 - \$10.00
Strategy: Buy-Hold through 2014

Note: Following its potential for early break out price gains, you can expect the value in MDDD shares to post steady month-to-month growth through 2014. Buy and hold can maximize your profit potential; however, consider selling a portion of your MDDD gains to recover some or all of your initial investment. As always, do your own due diligence, invest wisely and only with resources that you can comfortably put at high risk.

ADVERTISEMENT

2014 will be the breakout year for 3D printers... investors should move in now!

Makism 3D Corp.

**You may only have one shot at an entry-level position in MDDD.
I strongly recommend that you act swiftly...**

December 2013 January 2014 February March April May June

To My Fellow Investor:

3D printing has become the fastest growing new technology in years. 3D printer sales have soared 43% over last year and are projected to double in 2014...triple in 2015!

No matter where you do the research, one thing becomes abundantly clear...this is a tremendous opportunity to catch a technology revolution on the ground floor!

Now is the time to seize the profit opportunity in MDDD... before 3D printer sales take off in 2014!

Makism3D (MDDD) made its recent announcement of the Wideboy 3D printer in the professional/consumer price categories at \$1,500 and \$2,500 and \$4,000...a market that is wide open for this next-gen breakthrough!

MDDD shareholders can expect steady gains from growing product sales, but even faster gains can be expected in what I see coming in the second quarter.

Makism3D could be acquired by a major printer manufacturer...at the top of my list: Hewlett Packard and I'll explain why next.

continued on page 4

3D printing in a nutshell...

Industrial design is being revolutionized by the unlimited potential in 3D printing tech. With the introduction of the Makism3D Wideboy printer, 3D printing enters the era where 3D printing becomes accessible to all.

Next-generation technology from Makism3D could revolutionize 3D printing!

Makism3D Corp.

I expect the Makism3D Wideboy to dominate the pro-sume* price categories at \$1,500, \$2,500 and \$4,000 per unit.

*Pro-sume: professional performance in a consumer priced product.

MDDD presents a huge opportunity for today's investor to profit from this new category growth.

Trading around \$1.00, the MDDD immediate outlook is for 300% to 500% growth in early 2014.

Now is the time to make your move...
Makism3D Corp (MDDD) is a strong buy now!

MDDD hit my radar screen as one of the most obvious buyout opportunities you'll find in the market today!

An explosive entry into the market from Makism3D can make it a prime target for acquisition by a global technology firm.

There may be plenty of suitors, for MDDD but one stands out as a prime candidate:

Hewlett Packard (HP)!

Today, of the leading names in printing on paper, Canon, Brother, Epson, Xerox and Hewlett Packard, not one has a 3D printer that I can find now selling in the pro-sume market.

Later in this report, I'll get into more details why Hewlett Packard made it to the top of my list for an MDDD buyout.

First, it's important to get your head around how big the market for 3D printing is shaping up to be.

What's more, it's going to shape up fast. Over the next 2-3 years, 3D printer sales are projected to double, even triple over 2013 figures.

Driving this growth will be next-generation tech that makes 3D printing affordable and practical.

That's the kind of tech that Makism3D brings to market in the coming months. Believe me, this is next-generation technology at its best!

Price/performance breakthroughs introduced with the Makism3D Wideboy printer simply cannot be matched for the money in current tech. Here are the key reasons why the Wideboy is on the verge of revolutionizing 3D printing.

1. Wideboy prints higher resolution.
2. Wideboy prints larger structures
3. Wideboy prints more materials
4. Wideboy prints out of the box
5. Wideboy is priced for consumers

MDDD shares could post triple-digit gains in 2014! The time to buy is today!

Makism3D Corp.

No other printer I can find anywhere now or on the horizon comes close to these five key features.

This is a brand-new market. Nobody owns it and there are billions of dollars on the upside.

You can be certain of this: companies like Hewlett Packard, Canon, Brother and others won't be sitting on the sidelines.

They'll be fighting tooth and nail to cash in on the 3D printing boom. Sitting on the bench just isn't going to happen.

It's clear to me that these tech giants have watched closely to see how the 3D printer market shapes up... now they're ready to move.

The date to watch: March 10, 2014

That's the date the 3D printing world will descend on its annual trade show in Berlin, Germany.

This is the trade show that new products are made public and Hewlett Packard appears to be making the first move in what could become an explosive technology buyout frenzy.

HP plans to make its debut in the 3D printer space next year. CEO Meg Whitman made the announcement at the Canalys Channels Platform in Bangkok, where she said the company will focus on speed and cost.

Printer manufacturers recognize that when technology merges high-end performance with low-end prices, the door is opened to enormous new market penetration.

Makism3D may be the breakthrough product that makes the middle ground.

Makism3D (MDDD) can quickly soar from two powerful forces... organic growth in the market and/or acquisition by a major printer name wanting to fill this space immediately. Either way... **You could win big from a MDDD buy today!**

3D Printer sales are projected to skyrocket starting next year...

Here's where this gets interesting and why MDDD could be such a key buyout target for HP.

- 1 HP has no significant internal R&D in place to introduce a new technology by a rollout date in 2014. To meet this objective, they must acquire the technology from outside. MDDD stands as a potential target for such a buy.
- 2 MDDD has developed the first of its kind product that approaches the speed and performance of high-end 3D printers costing five- to ten-times more. This appears to be exactly the tech HP is looking to acquire.

Makism3D [MDDD] Cracks Key Price Barrier in 3D Printing, Making MDDD Ripe for a Buyout!

Makism3D enters a market category where sales are set to skyrocket!

- Forbes 8/27/13

The Basics

Which Industry Benefits?

The Future

Source: <http://www.makism3d.com> © 2013 Makism 3D Corp. All rights reserved.

MDDD shares could quickly soar 300% to 500% on news of a buyout!

Makism 3D Corp.

Makism 3D *Wideboy*

Somebody will put their
logo on Makism3D printers...
it's just a matter of who that will be...

Epson... Hewlett Packard...
Brother... Apple... Canon...
Microsoft... any one of many
big players could be looking
at Makism3D right now!

Makism3D designed itself to be the hot target for a high-profile tech buyout.

**Makism3D (MDDD) cracks key
price barriers in 3D printing,
making MDDD ripe for a buyout!**

I'll cover the details of this breakthrough in a moment; here are what Makism3D reports as key points that can make their Wideboy technology highly attractive to acquisition.

The Makism3D Wideboy 3D printer is:

1. Affordably priced between \$1,500 and \$4,000 a unit. This is a fraction of the cost of machines with similar material capabilities and is scalable to global market potential.
2. Plug and play, out of the box. Just plug it in, load software and start printing. No other printer can match its ease-of-use and user-friendly interface.
3. Extra large print platform allows user to print larger models. This can be an essential feature in professional applications.
4. Temperature controlled to prevent warpage and shape distortion. An essential requirement for

CAD-based modeling or one-off parts production.

5. Capable of printing a large variety of materials at high resolution. This may be the only printer in this price range capable of mass printing finished manufacturing parts.

All this and more in a consumer-priced 3D printer? Unheard of until now!

This is the kind of user-friendly, consumer level technology that can break the entire segment wide open.

I remember the day when my department bought its first color printer...a \$26,000 "professional" behemoth that used heated wax to build a color image!

Ink jet technology destroyed that technology both in performance and price.

I see Makism3D doing the same to the existing market for professional 3D printing.

In one swoop of technological achievement, Makism3D could obliterate the market for printers costing tens of thousands of dollars.

And here's the key point...

Next-generation technology from Makism3D could revolutionize 3D printing

Makism3D Corp.

Makism3D (MDDD) could quickly become the world's best-selling 3D printer!

In June of last year, Stratasys paid \$403 million for the company behind the MakerBot Replicator 2. Had they waited to buy Makism3D technology, here's what they could be offering for a 3D printer instead:

Wideboy A4-200

604 cubic inches	410 cubic inches
35 microns	100 microns
400w/24v	150w/24v
4	1
ABS, Nylon, HIPS, Polycarbonate	PLA
yes	no
\$2,500	\$2,200

Replicator 2

Makism3D wins with:

1.47-times larger build volume
2.85-times higher resolution
2.77-times more power supply
Three more print materials
Pro materials vs. plastics
WiFi connectivity
MSRP

Makism 3D

Wideboy

MakerBot Replicator 2

Cut to the chase...the Makism3D Wideboy is best in class!

Of the 18 top-rated 3D printers* selling under \$3,000 not one has better specs than these key performance specs featured above. Makism3D Wideboy stands to become the top performing 3D printer in its class, worldwide!

* <http://3d-printers.toptenreviews.com/index.html>

Makism3D has the technology that can propel sales to the top of the charts

Makism3D Corp.

Just like the price/performance breakthrough did for color printers...

Makism3D's price breakthrough means the market for its printing technology can be ramped up from niche to broad market scale.

This is the key component that will attract a buyout move from a global giant like Hewlett Packard.

The \$2,500 3D printer space is lead by the Makerbot Replicator 2X. To put it bluntly, specs released on the Makism3D Wideboy absolutely smoke the Replicator.

At left is a brief comparison chart that quickly illustrates my point.

Bottom line: Even though Replicator was bought out for \$403 million in June, 2012...its current product version appears to be outdated!

The company, Stratasys, which scooped up the Replicator may have moved a few months too soon. Stratasys now owns the Replicator, but the next-generation in 3D printing appears to be moving beyond this performance level.

Even while the ink on the Stratasys \$403 million deal is still drying... the technology it bought could be out of date.

Saddled with yesterday's technology, their current product offerings could be quickly bypassed as consumers move to Makism3D's next-gen tech. That's even more likely should Makism3D tech show up with a brand label from HP, Brother, Epson, etc.

A top-secret buyout in the works?

The Makism3D Wideboy could crush any product now selling in its price category!

There is no question that global technology companies are on a massive technology buying spree. Innovation is being shopped and the price tags have been staggering.

It's remarkable to think that as quickly as the 3D

Today's winning business strategy is to buy new technology!

Shareholders in little-known yet innovative technology companies are making out like bandits as major players scoop up everything they can find at top dollar prices.

Apple, Google, Yahoo!, Microsoft... they and many others are all paying fantastic sums to stay in front of emerging technology.

Makism3D Corp. (MDDD) may be the next big headline buyout... so if you get in now, your MDDD profit potential could be stunning!

printing industry is projected to grow, the majors are simply not to be found in the mix.

Why is that?

They're probably not designing a new product... they're buying it!

I have no doubt that with the innovation Makism3D brings to the 3D printer market it could take a big place in the future market for its printers.

However, from an investor's perspective, I see a bigger opportunity that could pay off quickly and handsomely.

I do not expect Makism3D will build this business on its own. That could take years and the market for 3D printing is soaring much too fast.

Today, I can't find a single consumer priced 3D printer sold by a major manufacturer. Not one.

Simple reason: These guys are waiting for the technology that can seriously penetrate a global market.

The consumer market will be the fastest growing portion of 3D printer sales

Makism3D Corp.

MDDD is a prime acquisition target that could cement a major tech company's hold on a multi-billion-dollar global market.

You can take this to the bank...

The 3D printing market is wide open and whoever is first in with the best product is going to grab a huge piece of this market right out of the gate.

MDDD is a grab-it-now opportunity that could quickly pay enormous buyout premiums to early investors. Now is the time to make your move and get MDDD in your investment mix.

You see it all around you. New ideas are creating overnight billionaires

Majors are paying billions in a mad scramble to dominate the next generation of technology.

This is the technology that could make high quality 3D printing as common as fax machines, scanners and color printers.

Somebody is likely to snatch this up soon and if you beat them in, you could pocket a fortune!

Stratasys bought Makerbot for \$403 million...and that's for a \$2,200 printer that only prints in plastic!

This was a big score for Makerbot shareholders, but Makerbot fell short of key requirements for broad market penetration.

"3D printing will explode in 2014, thanks to the expiration of key patents. Soon, you won't have to master the (challenging, time-consuming) task of learning how to model things in 3D..." ~ qz.com 8/26/13

"The consumer market is the fastest-growing portion of the 3D printing market, with expectations for 100%+ YoY growth in 2013." Makerbot [owned by Stratasys] describes its offering as intended for the 'pro-sum' market (manufacturer's suggested retail price is \$2,200-2,800), expecting many systems to be dual professional/personal use among small business owners or serious hobbyists" ~ Business Insider 9/17/13

It's just too darn complex for non-technical or inexperienced users.

Stratasys makes it clear that the complexity of owning and using its Makerbot Replicator 2x printer should be considered in advance of purchase. Quoting the website...

Makism3D's competition, the Replicator 2x, is:

"DESIGNED FOR DAREDEVILS AND 3D PRINTING EXPERTS".

 **Stratasys** website, October 2013

'Nuff said?!

I can all but guarantee you that a global company won't go near a product like this!

In fact, no one with any concern for backend customer service wants to be saddled with a machine designed for "daredevils and experts" only!

This is a key reason why the Makism3D Wideboy printer has such enormous potential for being labeled by HP, Brother, Epson, or whoever else lines up for a shot at this tech.

The global market for 3D printing is soaring to tens of billions of dollars. You can be certain that at least one major player is going to move on this aggressively.

Makism3D closes the gap between high-end performance and consumer price level

Makism3D Corp.

Two Paths to Profit with MDDD!

The Makism3D Wideboy printer appears ready to go global and as an MDDD shareholder, the value of your shares is staged to skyrocket!

I strongly recommend that you get some money on the table right now. Don't bet the farm, but get in now for the upside I see coming.

What's more, you don't have to depend on a buyout to get in on the potential profits. Even if Makism3D goes it alone, the Wideboy printer can be a flagship product that quickly penetrates global 3D printing markets.

1. Organic Growth...

Over the next 24 to 36 month, sales of 3D printers are expected to soar. 2014 should be the breakout year. 3D printer sales are expected to double over this year and a rapid growth rate can be expected to continue through the end of the decade.

By far, the fastest growing segment of the overall 3D printing market should be high-quality machines that

can serve in professional environments while selling at consumer-friendly prices.

The Makism3D Wideboy printer smashes through the technology limitations of previous generations.

2. Technology Buyout...

As reported earlier, the Makism3D Wideboy could soon be marketed under a new name. My top candidate is Hewlett Packard. Here's my outlook:

- HP should enter the 3D printer business in 2014 and they'll get there through acquisition!
- Makism3D's breakthrough technology is now prime for acquisition by a company looking to enter the 3D printer market ahead of other tech giants!
- This news can be worth a fortune to Makism3D (MDDD)... and you can still get in at the ground floor level!

Inside 3D PRINTING – Conference and Expo

How soon should you move on MDDD? I recommend immediately!

March 10, 2014... If you're not in by then, you're probably too late!

In first quarter 2014, you can expect a flood of news to hit the 3D printer marketplace. New products, acquisitions, and soaring investor interest... all this and more can be pushing MDDD shares north.

I expect this to culminate in one event, the "Inside 3D Printing Conference and Expo" opening on March 10 in Berlin, Germany.

2014 ushers in a run of 3D print expos worldwide. In addition to the Berlin expo, subsequent expos will be held in New York City, São Paulo, Brazil; Seoul, South Korea; Melbourne, Australia; Shenzhen, China; and Santa Clara,

RECOMMENDED BUY IN 3D PRINT TECHNOLOGY

**TIMEFRAME:
IMMEDIATE OPPORTUNITY**

Makism3D Corp.

CURRENT: Makism3D Corp. (MDDD)

Initial offering: Around \$1.00/share

Near Target: \$3.00

Long Target: \$5.00 - \$10.00

Strategy: Buy-Hold through 2014

Note: Following its potential for early break-out price gains, you can expect the value in MDDD shares to post steady month-to-month growth through 2014. Buy and hold can maximize your profit potential; however, consider selling a portion of your MDDD gains to recover some or all of your initial investment. As always, do your own due diligence, invest wisely and only with resources that you can comfortably put at high risk.

\$2,999 USD

761 cubic inch build volume,
6 print materials

Model A4-250

\$4,000 USD

951 cubic inch build volume,
6 print materials

Wideboy gantry design may prove to be its most unique and patentable design element. It enables the entire Wideboy product line to produce larger, higher-resolution models, use a wider variety of model-building materials that includes metal as well as various resin materials, and build with precision resolution unmatched by any similarly-priced 3D printer on the market today.

product, the Wideboy 3D printer.

Given the enormous market growth forecast for 3D printers in 2014 and 2015, **Makism3D (MDDD)** is positioned for stunning growth driven by next-gen technology in an atmosphere of buyout fury.

I can readily project **MDDD** at 300% to 500% gains through the first quarter of 2014.

In spring of 2014, with the opening of the 3D Print Expo in Berlin, the ground floor entry to **Makism3D (MDDD)** will probably have vanished.

...I've proven my proprietary Compound Income Trader (CIT) strategy to be a hands down winner.

If I were to publish my complete buy/sell track record, it would cover two pages with 334 trades, some winners and of course, some losers.

At the end of the day, it's the bottom line that counts and my CIT strategies have posted a staggering profit. You can find the complete summary buy/sell list on my website: <http://www.compoundincometrader.com>.

MDDD is a compelling buy opportunity you should act on swiftly

Makism3D Corp.

If you like quick profits, then my *Market's Line in the Sand Newsletter* can work for you as well!

My name is Andy Chambers and as a successful small business owner I discovered a passion for trading in the 1980's. After selling my business, I became a futures analyst for Dearborn Financial Corporation. After a few years as an analyst, I was promoted to editor of Futures Options Weekly. Two years later, I became Editor In Chief, overseeing the Futures, Futures Options, and Stock Options publications and advisory services. During my tenure at Dearborn, I also wrote, recorded, and published the Daily Trend Watch, a daily futures advisory, the Daily Trend Watch Classroom, an educational futures service, and the MTR Alert, a combination advisory and tutorial specifically related to futures options.

Since leaving Dearborn, I have been working as an independent trader and analyst for private individuals and corporations. Working on my own, outside the corporate structure, has allowed my trading and analysis to evolve to a much higher level. I have a keen eye for charts and trading patterns. I employ very specific methods to take advantage of patterns and trends, and have a strong options background which allows me to employ strategies that offer maximum reward with minimum risk.

Look, I'll level with you—I'm far from perfect. Losses can and do happen! But when you take advantage of what I teach you as part of the *Market's Line in the Sand Newsletter* — it's the best of all possible worlds.

- *The Market's Line in the Sand Newsletter Covers Every Tip, Technique, and Strategy Andy uses to Generate Over 75% Winning Trades!*

Our 100% Profit Performance Guarantee: If You Don't Make a Bundle, We Won't Make a Penny!

Nobody can guarantee profits, and losses are always possible. But I can guarantee this: If we don't deliver amazing performance with my new *Market's Line in the Sand Newsletter*, we don't make a dime!

In fact, given my track record over the last seven years, and given the fact that I've never delivered less than 125%...and with a technology opportunity like **Makism3D Corp.**(MDDD) available now... it's no time to dilly-dally.

Best wishes,

Andy Chambers
Editor, *Market's Line in the Sand Newsletter*

*NOTE: Stock and option trading have large potential rewards, but also large potential risks. You must be aware of the risks and willing to accept them in order to invest in the market. Don't trade with money you can't afford to lose. This is neither a solicitation nor an offer to buy/sell any stock.
